

# User Guide

## La Couverture Light

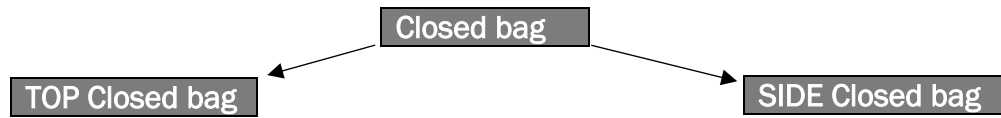

**Rev. 2.0**

Date 01/10/2023

You received the product already folded in 2 bags. One red bag is for the top layer and blue bag is for the side layer.

The bags must NEVER be brought to the Tarmac. The bags must stay in the cargo warehouse.

After each use the thermal protection must be cleaned and folded before each part gets back into the bag. Please never fold the product wet, to avoid or prevent mold from forming.

# IMPORTANT INFORMATIONS TO KNOW BEFORE USE OF THE PRODUCT

**PLEASE KEEP IN MIND THAT LA COUVERTURE LIGHT MUST BE PLACED OVER THE PALLET NET NOT UNDER!**

- a) All operations must be done with 2 persons
- b) The outside is marked with the label outside
- c) Do not use cutters, scissors or other sharp tools in the operation, this can damage the product
- d) Never place heavy weights on the **layers** or walk over it or drive with vehicles over the top layer, it can be damaged irreversibly.

**DO NOT EXPOSE TO FIRE OR HEAT SOURCES. THE COVER WAS DESIGNED TO PROTECT FROM SUN LIGHT NOT FIREPROOF**

- e) Position the cover at least 3 cm from the floor when build up to prevent the product to get stuck in the roller beds or dollies.
- f) Store the hybrid solution always in the bags do not expose to dust or dirt.
- g) If the cover gets wet, dry it before folding it and placing it back in the bag
- h) In case of need scan the QR code on the label sewed on both sides of the product and follow the folding instructions.
- i)

# Build up instructions

If the lower deck ULD is ready (even with the net) start placing the thermal cover

1. Open first the top layer bag and take out the folded and place it on top of the ULD

Place it in the corner and then unfold it on the ULD like in the left pic.

Unfold it up to the end of the ULD on the long side of 3,20mt.

spread the blanket along the long side until it is flat and smooth

2 persons, one opposite to each other must take the corner of the cover and unfold it over the rest of the ULD

When the top layer is covering the whole area on top of the ULD, start to lower the 4 side flaps of velco.  
The black Velcro part is to adjust the height of the cover with the sidewall

After the placement of the top layer start to fix the side layer at the right height. Remember, the side layer must go at least till **3 CM from the floor** and cover the whole side of the ULD.

Start always from the corner of the **long side** and unroll the side layer so that the logo of La Couverture is placed on the short side of the ULD. (see next picture)

Unroll the side layer all around the ULD fixing the 2 Velcro sides together.

# Break Down

**IMPORTANT:** Start disabling rolling up so that the outside of the roll is always grey. This helps you for the next building up activity. The Sidewall is rolled up correctly if the grey colour looks outside the roll.

Start to roll up the entire first side of the ULD and go on. This activity can be done also with 1 person.

Keep on rolling the side layer till the whole ULD is uncovered from all 4 sides.

When the roll is finished, place it into the relative bag.

Start folding the top layer by folding all four flaps of velcro that hang down

Do this for all 4 Velcro layers

Fold the Top part together along the long side.

Be careful that the Velcro flaps don't get out again

Fold it again from both ends

Place it on the floor

pull it up in the centre so that it folds like an accordion

Replace it folded in the special bag

### Tarmac placement:

top side placement
